NetDirector and Database Services announce strategic alliance to provide data automation to over 500 Process Servers Nationwide

Tampa, FL — May 17, 2006 – NetDirector and Database Services, Inc. (DBS) today announced the availability of Process Server's Toolbox (PST) Data network integration with NetDirector's data exchange service for the Mortgage Banking Industry. This integration will allow NetDirector subscribers, including Attorneys and Process Servers, to trade data and images bi-directionally with the PST nationwide network of Process Servers.

DBS currently has close to 600 Process Servers nationwide that are connected to their PST network. With the NetDirector connection in place, Attorneys in judicial states can now send file/defendant updates to any process server on the PST network. PST Process Servers can return updates to the Attorneys such as: complaint prepared or complaint picked up with date stamps. Documents such as Affidavit of Service, Date Stamp Complete, and others will process electronically through NetDirector and the PST network. Other transactions include intra-Process Server file transfers and updates based on regional assignments. This interface will significantly reduce manual data entry and data mishaps for both Attorney and Process Server. Document Automation will significantly reduce email, scanning, faxing, and indexing. NetDirector also provides a store and forward capability in case of service interruption. Depending on the number of defendants per Foreclosure file, automation time savings is estimated at 15-25 minutes per file.

"We are pleased to be able to provide our customers with a leading edge data exchange to expand our reach in the marketplace." said Bob Musser, president at DBS. "By connecting our Process Server-centric hub to NetDirector's general purpose data exchange, our customers will realize numerous benefits including: reduction in administrative costs, mitigation of staffing capacity issues, optimized business processes, improved employee productivity, and improved client satisfaction. By partnering with NetDirector, we are able to speed time to market for new data interfaces and focus our development resources on enhancing our software and support for process servers."

"By partnering with DBS, our subscribers now have access to a nationwide network of process servers with one connection to NetDirector" said Harry Beisswenger, executive vice president at NetDirector. "This alliance with DBS and their Process Server's Toolbox customers builds upon NetDirector's success in the Mortgage Banking industry. We continue to enhance the value proposition to our customers by expanding the number of interface choices and transactions."

About Database Services, Inc.

Database Services, Inc. based in Winter Park, FL provides Office Automation Software and Support for Process Servers and Courier / Messenger companies. Their flagship product is Process Server's Toolbox. It's the most popular software for private process servers in use in America.
